AUTOFORM DM ROADMAP 2024.3
Expires 31st December 2025

WEB DOCUMENT IMPORT

Phase 5 brings an end to our current schedule of web doc import improvements, adding barcode support. Matching to the CUK will allow quick document updates or rapid document creation.

PERFORMANCE TUNING

This release will focus on performance tuning for search and download.

BACKGROUND OPERATIONS

Enabling long-running operations to run asynchronously will allow more complex configurations and diverse document types

SECURE-BY-DEFAULT

Upgrading our core dependency Wildfly brings enhanced performance and security out the box. These benefits are in addition to improved automation capabilities and simplification of our single sign-on support.

… 2023 | DM 10.4 | 2024 – DM 10.5 | 2025 Q1 – DM 11.0

CLOUD CLUSTERING

DM Cluster support for Azure, paving the way to future improvements for automatic provisioning.

FEATURE RETIREMENT

In order to streamline and focus our development, this will be the last release to support client applications, webservices v1, and native batch support. From DM11 webservices v2 will also no longer be deployed by default.

UI REWRITE

Decoupling our frontend and migrating to a modern tech stack will deliver technical separation for easier implementation of new features. Furthermore, a slick new UI will significantly improve usability and bring Formpipe's products closer than ever before

SEARCH 2.0

The first feature to benefit from our UI rewrite, search 2.0 will aim to simplify usage by adding feature tours, provide inline help and adding new bulk document actions. All allowing new users to maximise their use of DM.

Formpipe.

Please note: Roadmap is only indicative and is subject to change
