Autoform DM 10.3 New Features.

Document Retention Policy

This release represents a step change in document retention, with the ability to set policies that govern when a document will be automatically deleted from the archive from within Autoform DM.

The new front-end administration module, Document Retention Manager, has been added to the Managers group on the Administration screen.

The new functionality facilitates the management of documents, particularly those subject to retention periods as part of regulatory requirements.

This supersedes the associated BPM functionality.

You can schedule a retention period, attached to a document definition date key.

Choose from one of the following options:

- Define a maximum age in days, using the document created date as the starting date.
- Identify a date key to associate with the document definition which will contain the expiry date of the document.

Autoform DM  **Document Retention**
Manage Document Retention Policies

► **Notifications**
Document deletion events occur at midnight every night. Configure email addresses here to receive reports.

Email Reports

Email [] on [success, failure]

► **Retention Policies**
Documents with a retention policy are deleted automatically when the conditions of the policy are met. Click the panel header to expand the retention policy you wish to modify.

Invoices (invoices)	<i>Delete after 365 days</i>
<i>Delete after 365 days</i>	
Mortgage Applications (mortgage-applications)	<i>Keep indefinitely</i>
<i>Keep indefinitely</i>	
Standard Document (standard-document)	<i>Use Date Key 1, else delete after 180 days</i>
<i>Use Date Key 1, else delete after 180 days</i>	
Statement (statement)	<i>Keep indefinitely</i>
<i>Keep indefinitely</i>	

Key Benefits

- Facilitates compliance with regulatory requirements
- Reduces storage / Azure costs by deleting documents that are not needed
- Audit logs for policy changes and report views

Document Import – Update Documents and CUK Match

This release includes updates to the document import UI and behaviour.

Customer Unique Key (CUK)

When uploading a new document, the Customer Unique Key (CUK) – simply a unique document reference of your choosing – will be checked against existing documents to see whether the CUK matches that of an archived document.

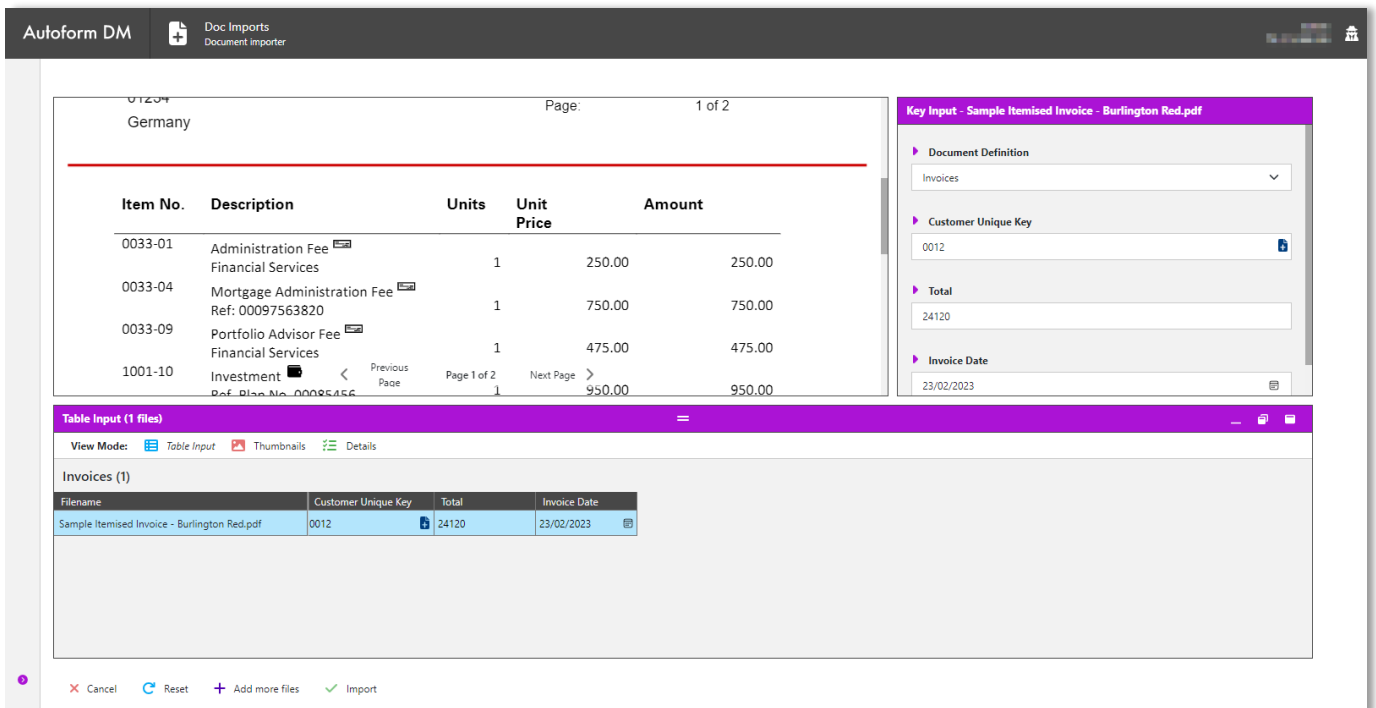

If there is a match, an icon will indicate this and the fields will be pre-populated with seed data.

Filename	Customer Unique Key	Total	Invoice Date
Sample Account Statement - Purple.pdf	0012	15050	23/02/2023

CUK Matched - Updating existing record

Importing will overwrite the latest version of the existing file with the latest inputs. This will also overwrite the metadata. Document history remains available for auditing.

If there is no match, a new document will be created.

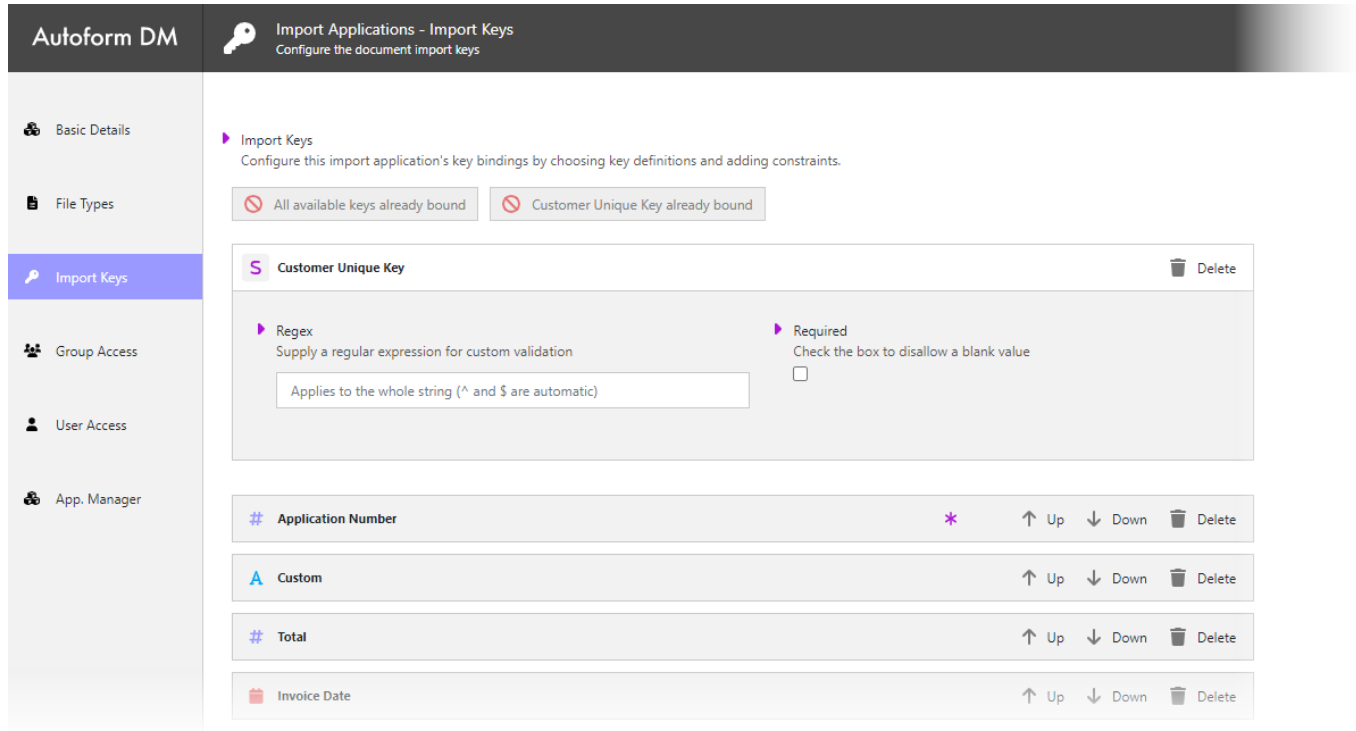

The screenshot shows the 'Autoform DM' document importer interface. It features a table of items with columns for Item No., Description, Units, Unit Price, and Amount. A 'Key Input' panel on the right allows for document definition, CUK entry, and invoice date specification. Below the main table, a 'Table Input (1 files)' section shows a preview of the imported document's metadata.

Item No.	Description	Units	Unit Price	Amount
0033-01	Administration Fee Financial Services	1	250.00	250.00
0033-04	Mortgage Administration Fee Ref: 00097563820	1	750.00	750.00
0033-09	Portfolio Advisor Fee Financial Services	1	475.00	475.00
1001-10	Investment	1	950.00	950.00

Filename	Customer Unique Key	Total	Invoice Date
Sample Itemised Invoice - Burlington Red.pdf	0012	24120	23/02/2023

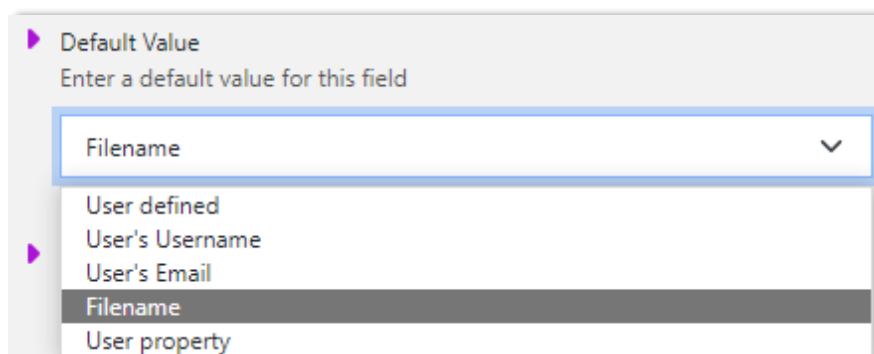

CUK is now shown as a separate field when importing in the Key Input pane.

Default Value

This option existed in the previous iteration but there are now more options:

- Now/Today
- User's Username
- E-mail
- User Properties (Extended Properties)

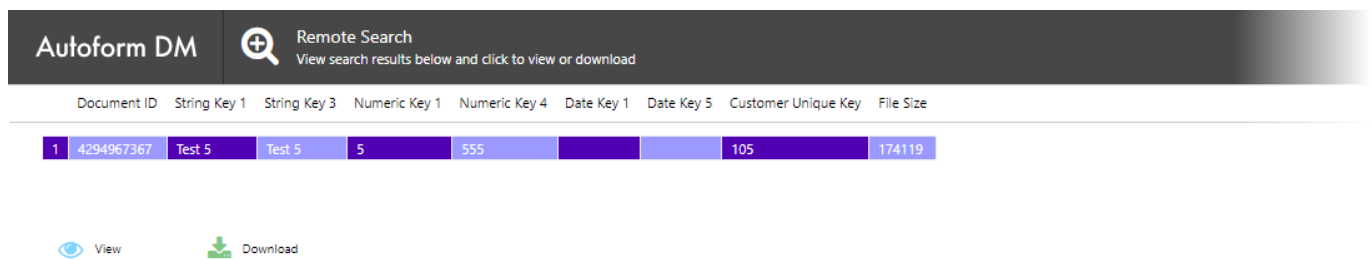

Note: Extended properties must have been defined elsewhere for them to be an option in the drop-down menu.

Remote Search Behaviour Change

The results table will now be shown by default, even if there is only one record.

The previous behaviour when there was one record was to show the file.

Note: It is possible to revert to the previous behaviour, if preferred. See [Remote Search](#).

The screenshot shows the 'Autoform DM' interface with a 'Remote Search' section. Below the search bar, a table displays search results. The table has columns for Document ID, String Key 1, String Key 3, Numeric Key 1, Numeric Key 4, Date Key 1, Date Key 5, Customer Unique Key, and File Size. A single record is shown with the following values: 1, 4294967367, Test 5, Test 5, 5, 555, (empty), 105, and 174119. Below the table, there are 'View' and 'Download' buttons.

	Document ID	String Key 1	String Key 3	Numeric Key 1	Numeric Key 4	Date Key 1	Date Key 5	Customer Unique Key	File Size
1	4294967367	Test 5	Test 5	5	555			105	174119

Secure By Default – View Audits

This release adds a new front-end administration module, called View Audits, for searching and viewing audit logs.

Search efficiently by preset audit log types, including document event history and user login history. Define the audit types and filter by date, Document ID and User.

You can view data individually and export to a CSV file, if required.

Configure Audit Search Parameters

Audit events
Select the audit events you wish to view
login X login-failed X logout X

Event presets
Select a preset event configuration from the list
Choose preset

Start date
Enter the start date
14/02/2023 00:00

End date
Enter the end date
24/02/2023 12:30

Document ID
Enter document ID to filter the list

User
Select a username to filter the list

Reset Search Audit Log

Results

Page 1 Export data Items per page 50

Event ID	Event type	Event user	Source IP	Event time	Full data
3	login	admin	10.2.1.148	22/02/2023 13:09:23	View Copy
4	logout	admin	10.2.0.138	22/02/2023 13:09:24	View Copy
5	login	admin	10.2.0.138	22/02/2023 13:10:41	View Copy

Key Benefits

- Efficiently search and filter relevant results
- Presets included
- Export data to a CSV file

Miscellaneous Improvements

QA Focus

Behind the scenes, we have been working to update and expand our integration tests and automatically build the software after every change.

The result? More automated test coverage, freeing up our testing team for in-depth analysis to ensure we provide stable and reliable software with even fewer bugs.

Support Portal Documentation

We are continuing to roll out new useful Article and Guide content that helps you use Autoform DM. We will continue to do this, and update content, to ensure your experience using our software is easy and enjoyable.

These pages have been added:

- Flag Usage
- Remote Search
- Document Retention Manager
- View Audits
- Document Imports 10.3 (Chapter)

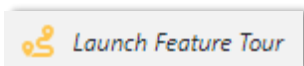

Feature Tours

The helpful Feature Tour is included in this release to help get you quickly up to speed with the new features included with Autoform DM 10.3.

These features are covered:

- Web Document Import and CUK matching
- View Audits

Just click the **Launch Feature Tour** button to begin the on-screen help.

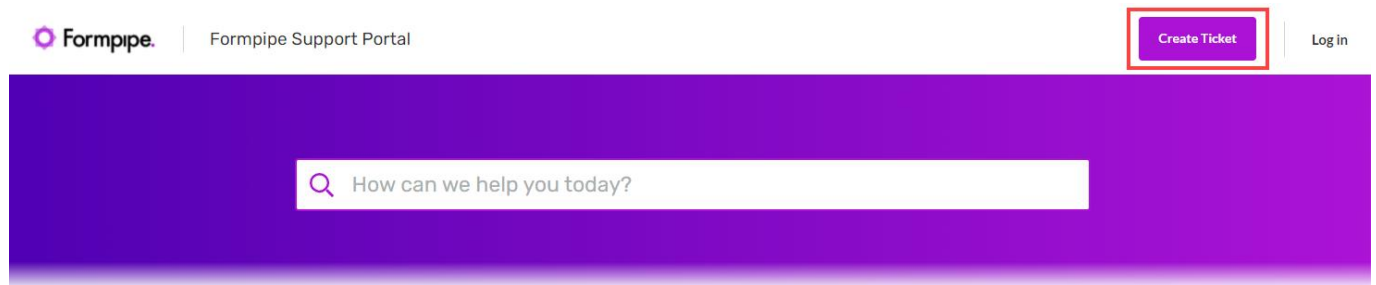

You can toggle the Feature Tour on or off at any time by clicking the button.

Maintenance Report.

The following fixes and enhancements are included with this version of Autoform DM.

If you encounter difficulty while using Autoform DM, please contact us via the **Create Ticket** button in the support portal.

Internal Ref.	External Ref.	Details	Area	Status
PDM-11483	-	Limiting maximum sessions was not working as intended	DM Server	Fixed
PDM-11695	-	Creating a default document import added keys in reverse order	Document Import	Fixed
PDM-11673	-	Updating application users did not write audit logs	Auditing	Fixed
PDM-11578	-	Long key labels overlapped across columns in Key Definition Page	UI	Fixed
PDM-11610	-	Some Line Item keys were incorrectly handled	UI	Fixed
PDM-11581	-	Cluster installer colours were incorrectly displayed	Installer	Fixed
PDM-6630	-	Creating a default search added keys in reverse order	Search	Fixed
PDM-11609	-	Remote search did not throw error for users with no access	Remote Search	Fixed
PDM-10799	-	NotSerializableException was thrown when cloning a user with the SQL application	User Manager	Fixed
