

Formpipe Software

Lasernet Connector for Microsoft Dynamics AX 2012 Release notes

Lasernet Connector for Microsoft Dynamics AX version 3.3.0.0

Lasernet
by Formpipe

Michael Wibe
10/1/2013

Enhancements

Support for R2 CU6

Report execution without Reporting Extensions*

Report regional setting parameter controls how data is represented in XML output. Number of decimals is rendered always to pass extended data type specifications from AX

File path validation is now fully on server site

Lasernet label editor / language text

Overlay files preview

New Formpipe Lasernet logo

“SubReport” setup is implemented with Query reports running as “SubReport” in elements

Archive support for other formats

“FileFormat” support on Custom and Email ports

“CustomOutputFilename” in the JobInfo based on “FileFormat”

Culture indifferent report output for Lasernet only. Fixed date and numeric format

Fix Wizard

Duplicate names fixing were introduced

Duplicate names in different case are now accepted, as XML understand it too

Wizard does not require loaded elements anymore, and can be executed on blank report

Re-run for changing section keys

Bug fixes

Giro / FIK card

Query Reports bug fixes

Export function missing “Reprint on forms”

Compilation error in LACParameters

Cannot add new relations to customized reports, when the Dataset name is different from the TabelName.

Minor bug fixes

Discontinued

Regional setting from Parameters menu

Regional setting aligned on the reports Parameters menu

* Execution now uses .NET class rather than Dynamics Framework DLL to get culture Id from language. This will not require framework on report execution.

Report validation might still require SRSFramework service deployed, as it needs to read deployed file from reporting server. However if not found in validation you get error message “deployed report validation failed” and the rest of validation will continue.
