Latest

- UI Overhaul
- Remote Search
- Async Operations

- Secure Document Sharing
- Rebranded UI

- **Kubernetes Support**  
Host scalable, high-availability deployments of Keep on Kubernetes.

- **Search Improvements**  
Enhancements to the new searching interface.

- **Postgres Support**  
Support for the popular SQL database.

- **Upload Improvements**  
Replacements for functionality deprecated in the DM Client.

- **AWS Support**  
Deploy Keep on Amazon Web Services infrastructure.

- **Document Definition Subtypes**  
Group document definitions for ease of use.

- **Document Workflows**  
Flexible document approval workflows directly in the Keep UI.

- **Additional Key Types**  
Booleans, dropdowns, and lists will become native key types.
