

BUG FIX RELEASE
 This release collects a number of bug fixes into a single release, responding to feedback from our valued customers.

DOCKER SUPPORT
 Reworking our Job Engine, Job Database, Scheduler, Failover and Job Event handlers will enable Lasernet to support Docker. This provides load balancing and scalability across your entire solution.

FORM EDITOR
 Form Editor will gain an enhanced form search, images in QR codes, gradients in shapes, start/stop grab events, high-DPI support, and general UI/UX improvement.

BUG FIX RELEASE
 As our official 'go to market' release, 11.0 will collect a number of bug fixes based on feedback from the 11.0 release candidate

CONFIG SERVER
 The Config Server will centralise our licence system with grab/log events and app registration for web services. Also, it will act as a workspace to share configuration across developers.

SERVICE MANAGER
 A new app for centralised management of server settings, environments, port numbers and restarting Lasetnet services.

MODULE AND APP IMPROVEMENTS
 General module improvements that include a new header option for JobInfos within the mail module, SharePoint environment substitution via JobInfo and support for app registration in Outlook Mail.

INSIGHTS, DEPLOYMENT AND FORM EDITOR IMPROVEMENTS
 Our insights 2.0 API will allow requests for environment statuses and performance counters, scheduled and command line deployments of configurations.
